ECE/CSE 474:
Intro to Embedded Systems

Lab Report Guide

This document is meant to act as an outline for any and all lab reports that you will write in this class. Whenever you write a lab report for this class, this should always be your first reference. If ever in doubt, please post any questions you have on Piazza. Though it is not required, if you would like to include code blocks in your Lab Reports, you may find the following resource helpful: http://www.planetb.ca/syntax-highlight-word

Two Main Sections:

Section 1: Procedure

-   Describe how you approached the assigned tasks, how you organized the code, and include any relevant diagrams, schematics, etc.

Section 2: Results

-   Describe the results obtained for the assigned tasks. Give a brief overview of the finished product, as it relates to what was asked of you. The reader should be able to visualize your system.
-   Include any relevant images, screenshots, etc.

Lastly, be concise. Your report should be approximately 2 pages in length excluding figures.
